

# Halo Sales Performance Report Card

Tony Serra Ford - Store #21047

Reporting week: August 24 - 30, 2026

A practical, week-over-week read on how your Sales team handles new leads, holds quality conversations, converts leads to shown appointments, and executes on the showroom floor - with clear, prioritized next steps you can act on this month.

Prepared by Huminic - Halo consulting analytics

## Executive summary

This report separates four kinds of statements so you can act with confidence: **direct results** (measured this week), **consultant interpretation** (a bounded reading of the measurements), **testable possibilities** (worth checking before acting), and **recommended actions**.

### What is working

**Consultant interpretation:** On target this period: Median first-response time (business hours); Be-backs vs fresh-ups balance; Leads unassigned past 2 hours; Unfilled personalization tags in messages. [based on SW-011, SW-045, SW-090, SW-142]

### Largest controllable opportunity

**Recommended action:** Appointment no-show rate (Appointment conversion) is the largest controllable opportunity, weighing off-target severity, three-store peer position, and evidence confidence. [based on SW-041]

### How the evidence connects

**Consultant interpretation:** A healthy median response time sits alongside leads with no tracked response within the first 30 minutes and a below-target set rate: fast average speed is not translating into set appointments while some leads get no tracked response in the first 30 minutes. [based on SW-011, SW-012, SW-031]

## At-a-glance scorecard

All 17 measured metrics for the week. The **scorecard is driven by operational targets** (practical starting thresholds for your stores). Published external market studies are listed later for context only and are not used to score your store where their definitions differ.

| Metric                                           | Result  | Target | Standing   | Peer rank | Confidence | Source / data age                                                 |
|--------------------------------------------------|---------|--------|------------|-----------|------------|-------------------------------------------------------------------|
| Median first-response time (business hours)      | 4.5 min | 10 min | On target  | 2 of 3    | Medium     | CRM lead report; weekly; accepted period 2026-08-24..2026-08-30   |
| Leads with no tracked response within 30 minutes | 3.1%    | 0%     | Off target | 1 of 3    | Medium     | CRM lead report; weekly; accepted period 2026-08-24..2026-08-30   |
| Rep first-response outliers vs the store median  | 66.7%   | 0%     | Off target | 2 of 3    | Low        | CRM lead report; weekly; accepted period 2026-08-24..2026-08-30   |
| Templated messages with no personalization       | 12.5%   | 0%     | Off target | 1 of 3    | Low        | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30 |
| Text-vs-call balance (voice avoidance)           | 28.6%   | 0%     | Off target | 2 of 3    | Low        | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30 |

| Metric                                       | Result | Target | Standing   | Peer rank | Confidence | Source / data age                                                      |
|----------------------------------------------|--------|--------|------------|-----------|------------|------------------------------------------------------------------------|
| Customers sending 2+ messages before a reply | 1.7%   | 0%     | Off target | 1 of 3    | High       | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30      |
| Unfilled personalization tags in messages    | 0%     | 0%     | On target  | 1 of 3    | High       | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30      |
| Same message reused across many customers    | 0.4%   | 0%     | Off target | 3 of 3    | High       | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30      |
| Very short, low-effort replies               | 0%     | 0%     | On target  | 1 of 3    | Low        | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30      |
| Link-only replies with no context            | 0%     | 0%     | On target  | 1 of 3    | Low        | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30      |
| Lead-to-appointment set rate                 | 15.8%  | 25%    | Off target | 1 of 3    | Medium     | CRM Sales report; weekly; accepted period 2026-08-24..2026-08-30       |
| Appointment show rate                        | 42.9%  | 55%    | Off target | 2 of 3    | Low        | CRM appointment report; weekly; accepted period 2026-08-24..2026-08-30 |
| Show-to-write rate                           | 0%     | 60%    | Off target | 1 of 3    | Low        | CRM Sales report; weekly; accepted period 2026-08-24..2026-08-30       |
| Appointment no-show rate                     | 57.1%  | 45%    | Off target | 3 of 3    | Low        | CRM appointment report; weekly; accepted period 2026-08-24..2026-08-30 |
| Be-backs vs fresh-ups balance                | 27.3%  | 100%   | On target  | 3 of 3    | Low        | CRM Sales report; weekly; accepted period 2026-08-24..2026-08-30       |
| Test-drive completion rate                   | 0%     | 50%    | Off target | 2 of 3    | Low        | CRM Sales report; weekly; accepted period 2026-08-24..2026-08-30       |
| Leads unassigned past 2 hours                | 0%     | 0%     | On target  | 1 of 3    | Medium     | CRM lead report; weekly; accepted period 2026-08-24..2026-08-30        |

Peer rank compares your three rooftops for the same metric (rank 1 is strongest); it is not an industry ranking. Confidence reflects the number of observations behind each measure.

## Response consistency

How quickly and how evenly new leads get a first response.

| Metric                                           | Result  | Target | Standing   | Peer rank | Confidence | Source / data age                                               |
|--------------------------------------------------|---------|--------|------------|-----------|------------|-----------------------------------------------------------------|
| Median first-response time (business hours)      | 4.5 min | 10 min | On target  | 2 of 3    | Medium     | CRM lead report; weekly; accepted period 2026-08-24..2026-08-30 |
| Leads with no tracked response within 30 minutes | 3.1%    | 0%     | Off target | 1 of 3    | Medium     | CRM lead report; weekly; accepted period 2026-08-24..2026-08-30 |
| Rep first-response outliers vs the store median  | 66.7%   | 0%     | Off target | 2 of 3    | Low        | CRM lead report; weekly; accepted period 2026-08-24..2026-08-30 |

### What the evidence says

**Consultant interpretation:** The store-average first-response time is 4.5 min, which reads on target - but that average hides inconsistency: 3.1% of business-hours leads had no tracked response within the first 30 minutes and rep first-response outliers are off target. A healthy median can coexist with leads that get no tracked response within the first 30 minutes, so average speed alone overstates coverage. [based on SW-011, SW-012, SW-015]

**Consultant interpretation:** Coaching to the store average would miss the real gap; the opportunity is even coverage of every lead, not a faster headline median. [based on SW-011, SW-012, SW-015]

### Worth testing

**Testable possibility:** Leads with no tracked response in the first 30 minutes may concentrate in specific hours, sources, or individual reps rather than being spread evenly; a per-rep/per-hour view would confirm. [based on SW-012, SW-015]

### Recommended actions

|                    |                                                                                                                                             |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Recommended action | Stand up a daily sweep of leads with no tracked response yet, so no business-hours lead passes 30 minutes without a tracked first response. |
| Owner              | Sales Manager                                                                                                                               |
| Cadence            | daily                                                                                                                                       |
| Success measure    | no-tracked-response-within-30-minutes rate trending to zero                                                                                 |
| Effort / impact    | Low effort / High impact                                                                                                                    |

## Conversation effectiveness

The quality and personalization of customer messaging.

| Metric                                       | Result | Target | Standing   | Peer rank | Confidence | Source / data age                                                 |
|----------------------------------------------|--------|--------|------------|-----------|------------|-------------------------------------------------------------------|
| Templated messages with no personalization   | 12.5%  | 0%     | Off target | 1 of 3    | Low        | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30 |
| Text-vs-call balance (voice avoidance)       | 28.6%  | 0%     | Off target | 2 of 3    | Low        | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30 |
| Customers sending 2+ messages before a reply | 1.7%   | 0%     | Off target | 1 of 3    | High       | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30 |
| Unfilled personalization tags in messages    | 0%     | 0%     | On target  | 1 of 3    | High       | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30 |
| Same message reused across many customers    | 0.4%   | 0%     | Off target | 3 of 3    | High       | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30 |
| Very short, low-effort replies               | 0%     | 0%     | On target  | 1 of 3    | Low        | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30 |
| Link-only replies with no context            | 0%     | 0%     | On target  | 1 of 3    | Low        | CRM messaging log; weekly; accepted period 2026-08-24..2026-08-30 |

### What the evidence says

**Consultant interpretation:** Messaging quality shows 4 flagged behaviors this period - Templated messages with no personalization, Text-vs-call balance (voice avoidance), Customers sending 2+ messages before a reply, Same message reused across many customers. These are observed message patterns, not proven intent; taken together they point toward template reliance and low-effort or one-way replies. [based on SW-021, SW-022, SW-133, SW-142, SW-145, SW-149, SW-150]

**Consultant interpretation:** Two or more messaging flags together suggest reps lean on templates and text over personalized, two-way conversation - a coachable quality gap, not a volume gap. [based on SW-021, SW-022, SW-133]

### Worth testing

**Testable possibility:** Template reliance may be driven by workload or CRM shortcuts rather than skill; a short message-quality review with reps would separate cause from symptom. [based on SW-021, SW-022]

## Recommended actions

|                           |                                                                                                                                                |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Recommended action</b> | Run a weekly message-quality review: personalize the opening, balance text with a call attempt, and replace link-only replies with a question. |
| <b>Owner</b>              | Sales Manager                                                                                                                                  |
| <b>Cadence</b>            | weekly                                                                                                                                         |
| <b>Success measure</b>    | flagged messaging behaviors trending down week over week                                                                                       |
| <b>Effort / impact</b>    | Medium effort / Medium impact                                                                                                                  |

## Appointment conversion

How leads move to set, shown, and written appointments.

| Metric                              | Result | Target | Standing   | Peer rank | Confidence | Source / data age                                                      |
|-------------------------------------|--------|--------|------------|-----------|------------|------------------------------------------------------------------------|
| <b>Lead-to-appointment set rate</b> | 15.8%  | 25%    | Off target | 1 of 3    | Medium     | CRM Sales report; weekly; accepted period 2026-08-24..2026-08-30       |
| <b>Appointment show rate</b>        | 42.9%  | 55%    | Off target | 2 of 3    | Low        | CRM appointment report; weekly; accepted period 2026-08-24..2026-08-30 |
| <b>Show-to-write rate</b>           | 0%     | 60%    | Off target | 1 of 3    | Low        | CRM Sales report; weekly; accepted period 2026-08-24..2026-08-30       |
| <b>Appointment no-show rate</b>     | 57.1%  | 45%    | Off target | 3 of 3    | Low        | CRM appointment report; weekly; accepted period 2026-08-24..2026-08-30 |

## What the evidence says

**Consultant interpretation:** Across the appointment funnel this period: lead-to-set is 15.8% (off target, target 25%+), show rate is 42.9% (off target), no-show rate is 57.1% (off target), and show-to-write is 0% (off target). The show rate is measured over every appointment row this period (its accepted formula counts shows over all appointment rows), so it is not the same denominator as an industry appointments-set benchmark. [based on SW-031, SW-032, SW-033, SW-041]

**Consultant interpretation:** The largest controllable step here is getting more leads to a set appointment; show and write cannot compound on appointments that were never set. [based on SW-031, SW-032]

## Worth testing

**Testable possibility:** A low set rate can reflect customer follow-through, appointment-request quality, the confirmation process, or CRM logging of set appointments; these are distinct causes and none is established without a per-appointment review. [based on SW-031, SW-033]

**Testable possibility:** A weak show or high no-show rate may reflect confirmation cadence rather than lead quality; a confirmation-call audit would separate them. [based on SW-032, SW-041]

## Recommended actions

|                    |                                                                                                                               |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Recommended action | Tighten the set-and-confirm routine: a same-day appointment ask on every worked lead and a confirmation touch the day before. |
| Owner              | Sales Manager                                                                                                                 |
| Cadence            | daily                                                                                                                         |
| Success measure    | lead-to-set rate moving toward the 25% target and no-show rate falling                                                        |
| Effort / impact    | Medium effort / High impact                                                                                                   |

## Showroom execution and ownership

Showroom follow-through, test-drives, and lead ownership.

| Metric                        | Result | Target | Standing   | Peer rank | Confidence | Source / data age                                                |
|-------------------------------|--------|--------|------------|-----------|------------|------------------------------------------------------------------|
| Be-backs vs fresh-ups balance | 27.3%  | 100%   | On target  | 3 of 3    | Low        | CRM Sales report; weekly; accepted period 2026-08-24..2026-08-30 |
| Test-drive completion rate    | 0%     | 50%    | Off target | 2 of 3    | Low        | CRM Sales report; weekly; accepted period 2026-08-24..2026-08-30 |
| Leads unassigned past 2 hours | 0%     | 0%     | On target  | 1 of 3    | Medium     | CRM lead report; weekly; accepted period 2026-08-24..2026-08-30  |

## What the evidence says

**Consultant interpretation:** Showroom execution this period: be-backs vs fresh-ups is 27.3% (on target), test-drive completion is 0% (off target), and lead assignment past 2 hours is 0% (on target). A zero test-drive value may reflect logging rather than activity - it does not prove no test-drives happened. [based on SW-045, SW-046, SW-090]

**Consultant interpretation:** Assignment timeliness passed this specific two-hour check this period; later ownership and execution quality remain separate questions this report does not measure, so a soft follow-through signal is not attributed to any single cause here. [based on SW-090, SW-046]

## Worth testing

**Testable possibility:** A low or zero test-drive value may be a CRM logging habit rather than missing showroom follow-through; confirm against the showroom log before drawing a performance conclusion. [based on SW-046, SW-045]

## Recommended actions

|                    |                                                                                                                           |
|--------------------|---------------------------------------------------------------------------------------------------------------------------|
| Recommended action | Confirm test-drive and visit logging discipline at the desk, then coach to complete a test-drive on every showroom visit. |
| Owner              | Sales Manager                                                                                                             |
| Cadence            | weekly                                                                                                                    |
| Success measure    | test-drive completion rising and logged consistently                                                                      |
| Effort / impact    | Medium effort / Medium impact                                                                                             |

## What the metrics say together

The strongest insights come from reading metrics in combination. Each statement below cites the specific measures behind it.

**Consultant interpretation:** A healthy median response time sits alongside leads with no tracked response within the first 30 minutes and a below-target set rate: fast average speed is not translating into set appointments while some leads get no tracked response in the first 30 minutes. [based on SW-011, SW-012, SW-031]

**Consultant interpretation:** A below-target set rate and a soft show rate coincide with a messaging-quality flag, suggesting the appointment gap is partly a conversation-quality gap, not only volume. [based on SW-031, SW-032, SW-021]

**Testable possibility:** Assignment timeliness passed its two-hour check while showroom follow-through is soft. One hypothesis worth testing is that the opportunity lies in execution after assignment; this does not rule out assignment quality, which the two-hour check does not measure. [based on SW-090, SW-046]

## Impact roadmap

Opportunities ordered by a deterministic evidence weight (off-target severity, three-store peer position, and confidence). This orders where to focus; it does not assert cause or blame.

| Priority | Opportunity                                      | Area                       | Standing   | Peer rank | Evidence score |
|----------|--------------------------------------------------|----------------------------|------------|-----------|----------------|
| 1        | Appointment no-show rate                         | Appointment conversion     | Off target | 3 of 3    | 5.6            |
| 2        | Lead-to-appointment set rate                     | Appointment conversion     | Off target | 1 of 3    | 5.4            |
| 3        | Appointment show rate                            | Appointment conversion     | Off target | 2 of 3    | 4.5            |
| 4        | Same message reused across many customers        | Conversation effectiveness | Off target | 3 of 3    | 3.8            |
| 5        | Leads with no tracked response within 30 minutes | Response consistency       | Off target | 1 of 3    | 3.6            |
| 6        | Show-to-write rate                               | Appointment conversion     | Off target | 1 of 3    | 3.6            |
| 7        | Rep first-response outliers vs the store median  | Response consistency       | Off target | 2 of 3    | 3.0            |
| 8        | Test-drive completion rate                       | Showroom execution         | Off target | 2 of 3    | 3.0            |
| 9        | Customers sending 2+ messages before a reply     | Conversation effectiveness | Off target | 1 of 3    | 2.4            |

| Priority | Opportunity                                | Area                       | Standing   | Peer rank | Evidence score |
|----------|--------------------------------------------|----------------------------|------------|-----------|----------------|
| 10       | Text-vs-call balance (voice avoidance)     | Conversation effectiveness | Off target | 2 of 3    | 1.5            |
| 11       | Templated messages with no personalization | Conversation effectiveness | Off target | 1 of 3    | 1.2            |

## Vehicle opportunity scenario

A transparent, bounded scenario - not a forecast or a promise. It estimates the additional shown appointments available if the lead-to-appointment set rate reached the operational target, then applies a labeled range of show-to-sale assumptions.

|                                        |                                                                                   |
|----------------------------------------|-----------------------------------------------------------------------------------|
| Step 1 - appointment gap to target     | $\max(0, 0.25 \times \text{leads} - \text{appointments\_set}) = 3.5$ appointments |
| Step 2 - additional shown appointments | $\text{appointment\_gap} \times \text{current\_show\_rate} = 1.5$ shows           |
| Step 3 - incremental vehicles (range)  | low 20%: 0.3   base 30%: 0.45   high 41%: 0.62                                    |

### Assumptions

- current show rate held at 42.9% (this dealer's measured appointment-show rate over all appointment rows this period)
- show-to-sale range low 20% / base 30% / high 41% - dated Foureyes H2 2023 reference upper bound (Internet+Phone 41% / Used 40%); NOT this dealer's measured rate
- single governed week; figures are a bounded opportunity scenario, not a forecast

### Important

- This is a scenario, not a promise, and implies no causation: closing the gap requires real appointment and follow-through work.
  - No dollar value is included because no accepted store-specific gross figure with lineage is available this cycle.
- No dollar figure is shown: the accepted model carries no store-specific gross with lineage this cycle, so a dollar estimate would be invented and is deliberately omitted.

## Notification and automation opportunities

The following alerts are **available - not activated**. Nothing here sends a message or changes your systems. Each would require your explicit approval to turn on.

### Available - not activated

|               |                                                                                 |
|---------------|---------------------------------------------------------------------------------|
| Trigger       | a business-hours lead reaches 30 minutes with no first response                 |
| Audience      | Sales Manager (and the assigned salesperson)                                    |
| Timing        | real-time during staffed hours                                                  |
| What it shows | a count and list reference of untouched leads needing an immediate first touch  |
| Guardrails    | business hours only; Sales leads only; no customer contact is sent by the alert |
| Type          | Notification only                                                               |

**Available - not activated**

|               |                                                       |
|---------------|-------------------------------------------------------|
| Trigger       | weekly lead-to-set rate stays below the 25% target    |
| Audience      | Sales Manager                                         |
| Timing        | weekly summary                                        |
| What it shows | the set-rate trend and the appointment gap to target  |
| Guardrails    | internal summary only; no automated customer outreach |
| Type          | Notification only                                     |

**Available - not activated**

|               |                                                                                  |
|---------------|----------------------------------------------------------------------------------|
| Trigger       | weekly no-show rate exceeds its target                                           |
| Audience      | Sales Manager / BDC Manager                                                      |
| Timing        | weekly summary                                                                   |
| What it shows | no-show trend and confirmation-cadence prompt                                    |
| Guardrails    | internal only; any customer confirmation messaging is a separate approved action |
| Type          | External action - requires separate approval                                     |

## Visibility expansion plan

278 additional signals are **not measured this cycle**. They are not failures - they are the next things this report can show once the underlying data is in place. They are grouped below by theme, with the practical next visibility unlock for each.

| Theme                                        | Count | What it could reveal                                                                                 | Next visibility unlock                                                                          |
|----------------------------------------------|-------|------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| Conversation quality                         | 62    | Conversation quality signals that are not part of this cycle's measured set.                         | Next visibility unlock: adding message wording and tone review to the accepted Sales feed.      |
| Customer reactivation and opportunity mining | 49    | Customer reactivation and opportunity mining signals that are not part of this cycle's measured set. | Next visibility unlock: a second Sales report combined with the current one.                    |
| Separate operational domain                  | 36    | This metric belongs to a separate operational domain and is not part of this Sales report.           | Next visibility unlock: separate-domain reporting would require a separately governed analysis. |
| Cross-functional and advanced signals        | 22    | Cross-functional and advanced signals that are not part of this cycle's measured set.                | Next visibility unlock: a second Sales report combined with the current one.                    |
| Lead sources and marketing                   | 18    | Lead sources and marketing signals that are not part of this cycle's measured set.                   | Next visibility unlock: a second Sales report combined with the current one.                    |
| Appointments, showroom, and deals            | 17    | Appointments, showroom, and deals signals that are not part of this cycle's measured set.            | Next visibility unlock: a second Sales report combined with the current one.                    |
| Customer reactivation and opportunity mining | 9     | Customer reactivation and opportunity mining signals that are not part of this cycle's measured set. | Next visibility unlock: a further addition to the accepted weekly Sales export.                 |

| Theme                                               | Count | What it could reveal                                                                                 | Next visibility unlock                                                                     |
|-----------------------------------------------------|-------|------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| <b>Cross-functional and advanced signals</b>        | 8     | Cross-functional and advanced signals that are not part of this cycle's measured set.                | Next visibility unlock: more than one week of accepted Sales history.                      |
| <b>Conversation quality</b>                         | 7     | Conversation quality signals that are not part of this cycle's measured set.                         | Next visibility unlock: an agreed exact rule and cut-off.                                  |
| <b>Conversation quality</b>                         | 7     | Conversation quality signals that are not part of this cycle's measured set.                         | Next visibility unlock: a second Sales report combined with the current one.               |
| <b>Cross-functional and advanced signals</b>        | 5     | Cross-functional and advanced signals that are not part of this cycle's measured set.                | Next visibility unlock: adding message wording and tone review to the accepted Sales feed. |
| <b>Data and CRM hygiene</b>                         | 5     | Data and CRM hygiene signals that are not part of this cycle's measured set.                         | Next visibility unlock: a second Sales report combined with the current one.               |
| <b>Conversation quality</b>                         | 4     | Conversation quality signals that are not part of this cycle's measured set.                         | Next visibility unlock: one added data field in the weekly Sales export.                   |
| <b>Appointments, showroom, and deals</b>            | 3     | Appointments, showroom, and deals signals that are not part of this cycle's measured set.            | Next visibility unlock: more than one week of accepted Sales history.                      |
| <b>Compliance and call-center coverage</b>          | 3     | Compliance and call-center coverage signals that are not part of this cycle's measured set.          | Next visibility unlock: one added data field in the weekly Sales export.                   |
| <b>Customer reactivation and opportunity mining</b> | 3     | Customer reactivation and opportunity mining signals that are not part of this cycle's measured set. | Next visibility unlock: one added data field in the weekly Sales export.                   |
| <b>Faster, fuller response coverage</b>             | 3     | Faster, fuller response coverage signals that are not part of this cycle's measured set.             | Next visibility unlock: a second Sales report combined with the current one.               |
| <b>Lead sources and marketing</b>                   | 3     | Lead sources and marketing signals that are not part of this cycle's measured set.                   | Next visibility unlock: one added data field in the weekly Sales export.                   |
| <b>Compliance and call-center coverage</b>          | 2     | Compliance and call-center coverage signals that are not part of this cycle's measured set.          | Next visibility unlock: an agreed exact rule and cut-off.                                  |
| <b>Customer reactivation and opportunity mining</b> | 2     | Customer reactivation and opportunity mining signals that are not part of this cycle's measured set. | Next visibility unlock: adding message wording and tone review to the accepted Sales feed. |
| <b>Customer reactivation and opportunity mining</b> | 2     | Customer reactivation and opportunity mining signals that are not part of this cycle's measured set. | Next visibility unlock: more than one week of accepted Sales history.                      |
| <b>Lead sources and marketing</b>                   | 2     | Lead sources and marketing signals that are not part of this cycle's measured set.                   | Next visibility unlock: more than one week of accepted Sales history.                      |
| <b>Compliance and call-center coverage</b>          | 1     | Compliance and call-center coverage signals that are not part of this cycle's measured set.          | Next visibility unlock: a second Sales report combined with the current one.               |
| <b>Conversation quality</b>                         | 1     | Conversation quality signals that are not part of this cycle's measured set.                         | Next visibility unlock: more than one week of accepted Sales history.                      |
| <b>Cross-functional and advanced signals</b>        | 1     | Cross-functional and advanced signals that are not part of this cycle's measured set.                | Next visibility unlock: an agreed exact rule and cut-off.                                  |
| <b>Data and CRM hygiene</b>                         | 1     | Data and CRM hygiene signals that are not part of this cycle's measured set.                         | Next visibility unlock: one added data field in the weekly Sales export.                   |

| Theme                                   | Count | What it could reveal                                                                     | Next visibility unlock                                                                     |
|-----------------------------------------|-------|------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|
| <b>Faster, fuller response coverage</b> | 1     | Faster, fuller response coverage signals that are not part of this cycle's measured set. | Next visibility unlock: adding message wording and tone review to the accepted Sales feed. |
| <b>Faster, fuller response coverage</b> | 1     | Faster, fuller response coverage signals that are not part of this cycle's measured set. | Next visibility unlock: one added data field in the weekly Sales export.                   |

## Complete metric appendix

Every one of the 295 Semantic Watchdog signals, one row each. Measured rows show the result, target, peer rank, confidence, and data source. Rows not measured this cycle show the specific signal and its next visibility unlock. A small number belong to a separate operational domain and are listed neutrally.

| ID     | Signal                                                                                      | Result                  | Target | Rank   | Detail                                                                       |
|--------|---------------------------------------------------------------------------------------------|-------------------------|--------|--------|------------------------------------------------------------------------------|
| SW-001 | Lead source volume drops >25% week-over-week vs trailing 4-week average.                    | Not measured this cycle | -      | -      | Next visibility unlock: more than one week of accepted Sales history.        |
| SW-002 | Duplicate lead rate exceeds 8% of daily intake (same phone/email/VIN interest).             | Not measured this cycle | -      | -      | Next visibility unlock: one added data field in the weekly Sales export.     |
| SW-003 | Percentage of leads with missing phone AND email >10% for any source.                       | Not measured this cycle | -      | -      | Next visibility unlock: one added data field in the weekly Sales export.     |
| SW-004 | Third-party lead provider ROI (gross/lead cost) falls below dealership breakeven threshold. | Not measured this cycle | -      | -      | Next visibility unlock: a second Sales report combined with the current one. |
| SW-005 | New lead source appears with zero source-crediting mapping (unclassified traffic).          | Not measured this cycle | -      | -      | Next visibility unlock: a second Sales report combined with the current one. |
| SW-006 | Internet lead close rate for a source drops >30% month-over-month.                          | Not measured this cycle | -      | -      | Next visibility unlock: more than one week of accepted Sales history.        |
| SW-007 | Bot/spam lead ratio (invalid phone patterns, disposable email domains) exceeds 5%.          | Not measured this cycle | -      | -      | Next visibility unlock: one added data field in the weekly Sales export.     |
| SW-008 | Lead-to-appointment ratio for a source falls below 8%.                                      | Not measured this cycle | -      | -      | Next visibility unlock: a second Sales report combined with the current one. |
| SW-009 | Cost-per-sold from a paid source exceeds gross-per-unit for that source.                    | Not measured this cycle | -      | -      | Next visibility unlock: a second Sales report combined with the current one. |
| SW-010 | OEM co-op lead volume drops without corresponding spend decrease.                           | Not measured this cycle | -      | -      | Next visibility unlock: a second Sales report combined with the current one. |
| SW-011 | Median first-response time (business hours)                                                 | 4.5 min                 | 10 min | 2 of 3 | CRM lead report; weekly; accepted period 2026-08-24..2026-08-30              |

| ID     | Signal                                                                       | Result                  | Target | Rank   | Detail                                                                                     |
|--------|------------------------------------------------------------------------------|-------------------------|--------|--------|--------------------------------------------------------------------------------------------|
| SW-012 | Leads with no tracked response within 30 minutes                             | 3.1%                    | 0%     | 1 of 3 | CRM lead report; weekly; accepted period 2026-08-24..2026-08-30                            |

| SW-289 | Personalization score: template signals vs custom content ratio.                         | Not measured this cycle | -      | -    | Next visibility unlock: adding message wording and tone review to the accepted Sales feed.      |
| SW-290 | Escalation predictor: probability this thread ends in complaint/lost/manager escalation. | Not measured this cycle | -      | -    | Next visibility unlock: more than one week of accepted Sales history.                           |
| SW-291 | Reactivation score: probability a dormant lead re-engages if contacted now.              | Not measured this cycle | -      | -    | Next visibility unlock: more than one week of accepted Sales history.                           |
| SW-292 | Equity opportunity score: expected gross from upgrade offer to current customer.         | Not measured this cycle | -      | -    | Next visibility unlock: a second Sales report combined with the current one.                    |
| SW-293 | Referral propensity score: likelihood a sold customer refers if asked.                   | Not measured this cycle | -      | -    | Next visibility unlock: a second Sales report combined with the current one.                    |
| SW-294 | Separate operational-domain metric                                                       | Not measured this cycle | -      | -    | Next visibility unlock: separate-domain reporting would require a separately governed analysis. |
| SW-295 | Best-channel/best-time model: per-customer optimal contact strategy.                     | Not measured this cycle | -      | -    | Next visibility unlock: more than one week of accepted Sales history.                           |

## References and method note

Your store is scored against operational targets, not against the studies below. These public market studies are provided for context only. Where a study's definition differs from how a metric is measured here, it is explicitly not used to score your store.

- Foureyes - Q1 2026 dealership funnel study: <https://www.foureyes.io/blog/dealership-close-rates-by-metro>
- Foureyes - sales-process definitions: <https://support.foureyes.io/en/articles/8504360-keep-your-eyes-on-the-prize-with-sales-process-performance>
- Foureyes - dealership appointment study: <https://www.foureyes.io/blog/dealership-data-study-appointment-rates>
- Foureyes - 2026 dealer benchmarks: <https://www.foureyes.io/blog/2026-automotive-dealer-benchmarks-report>

- Pied Piper - 2026 Internet Lead Effectiveness study: <https://www.piedpiperpsi.com/press/press-release-infiniti-dealers-rank-highest-in-2026-web-lead-response-study-ai-and-automation-drive-industry-improvement-512.htm>

Definition note: the appointment-show and appointment-set market figures use denominators (appointments set / contacted opportunities) that differ from this report's measured definitions, so they are context only and are not used to score your store. The web-lead response study is a 24-hour-answer composite, which differs from this report's median business-hours response measure.

## Your next 30 days

A simple management cadence to convert this report into results. Keep it light and consistent.

|               |                                                                                                                                                                      |
|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Week 1</b> | Stand up a daily first-response sweep so no business-hours lead passes 30 minutes without a tracked first response; brief the team on this report's top opportunity. |
| <b>Week 2</b> | Tighten the set-and-confirm routine: a same-day appointment ask on every worked lead and a confirmation touch the day before.                                        |
| <b>Week 3</b> | Run a short weekly message-quality review: personalize the opening, balance texts with a call attempt, and confirm test-drive and visit logging at the desk.         |
| <b>Week 4</b> | Review the scorecard again, confirm the top opportunity is moving, and decide whether to turn on any of the available (not activated) alerts.                        |

## Top three opportunities to watch

1. Appointment no-show rate (Appointment conversion)
2. Lead-to-appointment set rate (Appointment conversion)
3. Appointment show rate (Appointment conversion)
